

## **EFFECT OF MAGNETIC WATER ON SOME INDIAN CROPS.**

Magnetic phenomenon is Universal in nature. Earth is a magnet. Study shows the influence of magnetic water on structural and functional parameters of a plant.

Magnetic water acts like "Biostimulation". No adverse effect of magnetic water on plant growth. Indian crops like wheat, methi, dhane were used. Magnetic water using N-pole & S-pole was used to see its effect on seed germination, length of a plumule, length of a radical, rate of germination & weight was observed & recorded.

Exposure of the seeds to magnetic water under laboratory conditions has improved

1. Rate of germination.
2. Length of radical, plumule.
3. Overall healthier growth was recorded.

This growth was much more effective when S-pole magnetic water was used.

The scope of magnetic water in the productivity & rate of growth of Indian crops will become evident from our study.
